461 captives were so employed in olden times. Although such
357 servants received no wages slavery was never known among the Nama. They were regarded as belonging to the family and quite often their masters were on very good terms with them.

262 It has already been mentioned that their diet consisted chiefly of milk and meat; but they never had a specific national food. They fed on whatever their environment offered them. Leaves of certain plants, bulbs, wild onions, berries of various shrubs, fish, birds, mice and lizards had to fill their dishes and to this very day such things are not scorned even by labourers, who get their daily ration of mealie-meal.

262 Nor is it desirable that the Nama should leave off eating
● 146 the old field-food "veldkos" altogether, neither is it advisable for the Government to prohibit them from looking for food in the fields. This veld-kos constitutes the Nama's vegetables, and wherever the Namas deemed themselves too dignified to look for it, or where they could not find it, their health always suffered. Everything should be done to encourage the Nama to avail themselves fully of the veld-kos growing in their neighbourhood, as their wages are never
[465] sufficient to enable them to buy vegetables regularly. Moreover, European vegetables are too strange and unpalatable to them.

244 7. Nowadays it is possible for only few to have their own
797 gardens. During the time that the missionaries took pains to try to make the nomadic tribes fixed residents, they tried to introduce hitherto altogether unknown horticulture and here and there with success. To please the missionaries they planted pumpkins, mealies and other garden plants, now and again with good results. When, however, the exhortation of the missionaries ceased they neglected their gardens even where water conditions were favourable. Gardening requires daily and patient exertion as well as a disposition that can look ahead, and this does not appeal to the Nama when there are other ways of making a living.

224 8. The Nama is much more interested in hunting than in gardening. Their ancestors had applied themselves to it, and with bow and arrow, followed by well-trained dogs, they would chase game untiringly till they killed it. In addition to this
411 they knew the art of charging the points of their arrows with a home-made poison which they got by condensing the milk
[824] sap of a certain euphorbia. After the Nama had become acquainted with the use of fire-arms, the gun, as well as gunpowder and lead, became the most popular trading articles of the travelling tradesmen. But fire-arms proving themselves very dangerous weapons in the hands of the Nama during their wars and rebellions of the last decade, few to-day are
262 privileged to possess a gun. It is not everything that falls to his gun on a hunting trip which is carried to the Nama
